# Assured IP services

An access circuit designed specifically for use with our IP products

- End-to-end service provided and fully managed by Gamma
- Advanced monitoring and diagnostics across all service elements
- Cost-effective access solutions for sites with up to 30 concurrent calls required

### How it works

Our IP Assured services have been specifically designed and based on our extensive experience and understanding of carrying voice traffic over IP based access.

Coupled with our range of IP products and industry recognised SIP trunking service, we are able to supply you with a full end-to-end IP telephony-based solution to suit your business needs, while helping you take advantage of all the benefits IP-based voice provides.

### Who is it for?

Assured IP Services is an attractive proposition for businesses who are looking for an IP telephony hosted solution that is fully supported by one provider, to stringent and effective service levels, with support for all elements of the service.

It is also a viable option for businesses who may be considering a SIP trunk solution as an alternative to ISDN (up to 30 channels) with guarantees on availability and voice quality.

## Phone services and systems: IP Assured services

### Take a closer look

We can supply a number of different products depending on your company's existing or growing needs:

Product Name	Maximum No. of calls supported*
Assured 5	5
Assured 10	10
Assured 15	15
Assured 20	20
Assured 30	30

\*Channels quoted using G729 codec, however G711 is also supported for use on these services.

All of this comes complete with the added service wrap of a preconfigured Cisco router and remote access to assist in ensuring your overall IP based voice offering is delivered right first time!

### Benefits

- Combine our IP product suite with Assured concurrent number of channels and Service Level Agreements.
- Buy a full end-to-end IP service from an organisation who knows how to manage IP voice across networks, and has designed its products around this core understanding.
- Use the latest DSL access products to deliver your voice traffic.
- Advanced monitoring, diagnostic and adjustments of the full end-to-end solution during the life of your product ensures the highest quality of service is maintained.
- One-bill solution and one point of contact for any issues, meaning Gamma takes accountability of the quality of the call provided.
